Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 4, and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Torgerson et al. (US 6722759) in view of Sakai (US 5530463).

Torgerson et al. discloses the following claim limitations:

As per claim 5: a printer cartridge comprising a body; printing fluid storage (figure 3, element 71), a pagewidth printhead having a first print chip and a second print chip (figure 2, elements 181); and a fluid connection between the printing fluid storage and the first and second print chips (figure 3, element 29) wherein the length of the first print chip added to the length of the second print chip is at least equal to the length of the pagewidth printhead (see figure 2).

As per claim 2: the first and second print chips abut together to extend the length of the printhead (figure 2, elements 181)

As per claim 4: electrical connectors (figure 2, element 74) located at opposing ends of the printhead and in electrical communication with the first and second print chips (column 5, line 43-column 6, line 2).

Torgerson et al. does not disclose the following claim limitations:

As per claim 5: a pagewidth printhead having a body configured for user insertion and removal from a complementary cradle in an inkjet printer.

Sakai discloses the following claim limitations:

As per claim 5: a pagewidth printhead (figure 3B, element 22) having a body configured for user insertion and removal from a complementary cradle (figure 3B, element 26) in an inkjet printer (figures 3A-3C).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the printer cartridge taught by Torgerson et al. with the disclosure of Sakai et al. in order to provide an easy method of replacing empty ink cartridges.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura E. Martin whose telephone number is (571) 272-2160. The examiner can normally be reached on Monday - Friday, 7:00 - 3:30.
